ANKLE FOOT ORTHOSIS

The Advantage™ Ankle Foot Orthosis (AFO) is used to support and align, prevent or correct deformity, and substitute or enhance function of the foot. Indicated to correct foot drop during ambulation, this orthosis is injection molded and trimmed low in the malleolus area for comfort and durability.

HOW TO APPLY:
The AFO must be worn with a sock and/or supportive shoe. Place the splint inside the shoe, followed by your foot with AFO underneath the foot. The top strap of the AFO should rest at mid-calf. Adjust and secure around leg using the Velcro.

Periodically, remove the orthosis to check skin for any redness or irritation. Contact a physician if redness does not subside within 30 minutes or if discomfort persists. This product can and should only be modified by a qualified medical professional.

CARE INSTRUCTIONS:
Clean the AFO regularly with a damp cloth and soapy water. Leave it to dry naturally before reapplying.

TRIMMING ORTHOSIS:
Have the patient wear the orthosis, and mark necessarily adjustment lines. Remove orthosis and cut along the line using cast scissors. Smooth any rough edges with sand paper or equivalent.
